The high speed Red Rooster turbine grinders are specifically destined for grinding and de-burring with hardmetal burrs. The good torque and power ratio of the turbine motor transmit a stable speed of the shaft, even under loads. This is truly a very light-weight and compact die grinder. Use for moulds and dies but also for non-metallic materials.

Characteristics:

- Low noise-level by means of integrated exhaust-air muffler
- On/Off switch in the hose for flexibility of handling the tool
- Contactless turbine motor ensures long lifetime and low vibration levels
- This grinder can be used with oil-free air
